Hi,

I am working with the Individual modules of NFHS I-IV. I want to create an unbalanced panel where the woman enters the panel at the time of her marriage and exits at the time of interview also containing birth history data among other variables. Basically, I want the following

indvID	Year	Ageatbirth	Child_id	Date of Birth	Birth_order
1	1981	25	1	4/3/1981	1
1	1983	27	2	12/15/1983	2
1	1985	29	3	11/1/1985	3
2	1980	22	1	1/1/1980	1
2	1984	26	2	3/1/1984	2

Do I simply reshape the data to get the result? Thanks!
