
Subject: Deriving district population size from DHS weights?

For my analysis, I would need to retrieve the size of the population of DHS region / district (for many surveys). I was wondering if this is possible to derive the district's population size from the DHS weights, since those are meant to adjust for the district's population size.

If not, is there any other way to derive the district's population size?

I would appreciate any help !

All best,
Camille
