Following is a response from DHS Research & Data Analysis Director, Tom Pullum:

You need to add a "singleunit" option to svyset. For example, use

```
svyset [pw=wt], psu(v021) strata (v022) singleunit(centered)
```

The word in parentheses can be "centered" or "scaled" or "certainty". The results are virtually indistinguishable, whichever of the three you use.
