Thank you so much dear Bridgette. I got it very helpful. I also wonder if I can get your help on how can I extract the data for newborns in the last five years from the BR dataset. It has a total of 41392 rows in SPSS(in its long-form, I guess). But I need to have the exact sample size of neonates in the five years including twins. When I try to extract it using the variable "Births in the last five years (0V208)", I got a very high sample size than my expectation. Thanks!

Getiye
