I realise I have made a mistake and created the unique identifier IDHSPID. However, after trying to merge using the following code on Stata:

gen sample = string(81805)

gen str idhspid = sample + caseid

In master file:

merge 1:1 idhspid using "original DHS data"

I get the following, where the observations are not matched

Result # of obs.

126.364 not matched

from master 106,890 ( merge==1) from using 19,474 (\_merge==2)

matched 0 (merge==3)
