Hello all,

I am conducting research on IPV against men in Kenya using DHS 2014 using approx 10 variables both demographic and on physical & sexual abuse by former/current wife or partner. When i run statistical analysis, i get a lot of missing values. How do i focus mainly on men who participated in the DV interview (only 39%) (SMDV) and how do i track/flag who answered the related demographic questions.

In addition:

MV501

MV502

MV504

All address the former/current partner. Data did not make sense when I recoded then combined.

MD106, 107, & 130A all address physical IPV.

MD108 & MD 130B- sexual abuse. Can I combine them?

MD120- is blank, no data

Thanks.

Catherine.
