Hi,

I am trying to find out the mechanism for sample selection for women for the domestic violence module in Colombia surveys. I remember reading a footnote somewhere saying Colombia is an exception to the usual DHS method of selecting women for the domestic violence module (since all eligible women in the household are surveyed whereas the usual being one eligible woman per household). I am unable to find documentation in English which mentions the sample selection of women within the household for this module. It would be great if I could get help with this. Thanks!

Aditi
