Hi,

I am trying to find out the mechanism for sample selection for women for the domestic violence module in Colombia surveys. I remember reading a footnote somewhere reading Colombia is an exception to the usual DHS method of selecting women for the domestic violence module (since in Colombia, all eligible women in a household are surveyed whereas the usual is one eligible woman per household). I am unable to find documentation in English which mentions the sample selection of women within the household for this module. It would be great if I could get help with this. Thanks!

Aditi

P.S. Sorry I posted this question on a different forum earlier (other countries) but this forum seems more relevant so I'm posting it here again. I could not find a delete message option for the previous one.
