The dataset contains 2004-2008, but was duplicated to allow it to appear for 2007-08 as well as 2004-06. This was done because the Peru surveys were reported on the web page as 2004-06 and 2007-08 separately, following the pattern of the survey reports that were produced.

If you wanted to analyze 2004-06 you need to select on v007 <= 2006, and for 2007-08 select on v007 >= 2007.
