Dear DHS Program,

Thank you for the opportunity to suggest revisions to the DHS-7 Questionnaires. On behalf of the Diarrhea & Pneumonia Working Group's M&E Subgroup (see below for more information), we would like to suggest the following changes to improve the measurement of ARI cases in children under age five:

- Remove the skip pattern in Q.527, "Has (NAME) had an illness with a cough at any time in the last 2 weeks?"
- Revise the wording of Q.528 to, "Has (NAME) had fast, short, rapid breaths or have difficulty breathing at any time in the last 2 weeks?"

Please find attached the completed guideline form with additional information supporting these changes. If you have any questions, please do not hesitate to contact me. We again thank the DHS Program for taking our recommendation into consideration.

Warm regards,

Felix Lam

Monitoring and Evaluation Subgroup Lead, Diarrhea & Pneumonia Working Group

Monitoring and Evaluation Manager, Clinton Health Access Initiative (CHAI)

#### About the Diarrhea & Pneumonia Working Group

Formed in late 2011, the Diarrhea & Pneumonia Working Group aims to reduce mortality and morbidity from child diarrhea and pneumonia by accelerating treatment scale-up in 10 high-burden countries which account for over 60% of the global burden--Bangladesh, Democratic Republic of Congo, Kenya, India, Niger, Nigeria, Pakistan, Tanzania, and Uganda. The Working Group, co-chaired by the Clinton Health Access Initiative (CHAI) and UNICEF, consists of members from over 40 organizations working in child health including implementing partners, donors, and the private sector. Specifically, the Working Group provides technical assistance, resource mobilization, and monitoring and evaluation support to organizations and governments working to implement national scale-up plans for essential medicines and/or related RMNCH strategies (UN Commission on Life-Saving Commodities, GAPPD, A Promise Renewed, etc).
