Subject: NFHS 3 stratification
Posted by Archana on Wed, 20 May 2020 09:03:40 GMT

Hello all,
I have used hv023-'stratification used in sample design' for generating sample weights for men's data in NFHS 4 by merging it with the PR data.
I want to generate similar weights for men's data in NFHS 3 but the variable 'stratification used in sample design' is missing.
I have used the following code to generate weight in NFHS 4:
gen survweight=mv005/1000000
gen stratum=hv023
svyset mv021[iweight=survweight],strata(stratum)
