I think there is a typo in 'Lesotho DHS 2014.xlsx' found here:

<https://dhsprogram.com/topics/wealth-index/Wealth-Index-Construction.cfm>

The Analysis N (9402) used in the 'Common' tab is the same as the Analysis N used in the 'Urban' tab. And the Analysis N (2798) used in the 'Rural' tab is the same as the value I found for urban (variable HV025 == 1). Urban+Rural = Common, correct? But this is not the case in the xlsx document.

Thanks for looking into this!
