Hi, I hope this finds you well. I was the ICF Survey Manager for the 2016 UDHS. In that survey, we did not conduct biomarker collection in the households where we had the domestic violence module for women, so there will not be anthropometry data for the children of those women. There is an explanation of the sample on page 3 of the Final Report (<https://dhsprogram.com/pubs/pdf/FR333/FR333.pdf>), please don't hesitate to let us know of other questions.

Best,
Julia
