Following is a response from DHS Research & Data Analysis Director, Tom Pullum:

You should be ok if you just use the original weights, which are v005 for data in the IR files and mv0005 for data in the MR files. You do not need to make other adjustments and you do not need the 021 and 022 variables.

I recommend a separate graph for each outcome. You could use lines or bars. Unfortunately, we cannot give more details on how to do this.
