I need Stata codes to compute parameters (Cm, Cc, Ci and Ca) of the Bongaarts' model using DHS data. Any help?

I would like to estimate the parameters (Cm, Cc, Ci and Ca) of the Bongaarts' model on proximate determinants of fertility using DHS data ( $TFR = TF \times Cm \times Cc \times Ca \times Ci$ ).

Can someone share his stata codes with me? It would be greatly appreciated.
