Trevor: thanks so much, so would this be the correct svyset specification?

```
svyset psupool, strata(stratapool) weight(weight2) vce(linearized) singleunit(missing) || _n,  
weight(weight)
```

Note: Stage 1 is sampled with replacement; further stages will be ignored for variance estimation.

```
pweight: <none>  
VCE: linearized  
Single unit: missing  
Strata 1: stratapool  
SU 1: psupool  
FPC 1: <zero>  
Weight 1: weight2  
Strata 2: <one>  
SU 2: <observations>  
FPC 2: <zero>  
Weight 2: weight
```

Thanks so much - cY
