Trevor: thanks so much, so would this be the correct svyset specification?

svyset psupool, strata(stratapool) weight(weight2) vce(linearized) singleunit(missing) || _n, weight(weight)

Note: Stage 1 is sampled with replacement; further stages will be ignored for variance estimation.

```
     pweight: <none>
         VCE: linearized
 Single unit: missing
    Strata 1: stratapool
       SU 1: psupool
      FPC 1: <zero>
   Weight 1: weight2
   Strata 2: <one>
       SU 2: <observations>
      FPC 2: <zero>
   Weight 2: weight
```

Thanks so much - cY
