Hello!

I observed that malaria results were blank in Nigeria DHS 2013 data but available in DHS 2018 results. I am comparing two years.

The variables are:

Final result of malaria from blood smear test- (HML32) blank in DHS 2013

-NA - Result of malaria rapid test (HML35) blank in DHS 2013

I am also looking for the variable that captures TB infection or TB results among children to aid the estimation of childhood TB incidence.

Thanks in anticipation of any kind help.

Kind Regards,
Placid
