---

Dear DHS Teams,

I would like to perform analysis using DHS data from Senegal from 2005 to 2017 to observe evolution of facility based deliveries at a regional level.

My question is about continuous DHS from 2012-2013 to 2017. I did some research on your forum and I saw that the 2013-2014 survey was based on the 2002 census and the 2015-2016 surveys were based on the 2013 census. If I want to observe changes over time at a regional level, do I need to combine the data for 2013 and 2014, 2015 and 2016? Can I compare these surveys as independent surveys?

Many thanks in advance for your response.
