Following is another response from DHS Senior Analysis & Research Manager, Shireen Assaf:

"main" is a program defined on line 661 of the FE_TFR.do file. So if you ran that program, Stata should recognize what "main" is.

Please try to run everything from the beginning using the FEmain.do file. Make sure you have the correct paths and define your survey. Please also make sure that you have not removed anything or commented anything out that is required for the files to run. I ran the FEmain.do file from GitHub using the Nigeria survey and it all runs smoothly.
