Dear All,
I am considering the Ethiopian DHS collected in 2000, 2005, 2011 and 2016.

How do I can create a variable measuring newborn birthweight in each survey round in stata?
It would be good if the variable is categorized as stunting, normal, wasting etc

I then would like to combine them to study intergenerational effects of better healthcare services by the mothers.
.....
Thank you in advance!
