Dear all, I want to examine factors associated with perinatal mortality. So, which dataset is preferable? How can I calculate the result of table 8.4 Ethiopia DHS 2016 especially, perinatal mortality rate (33 per 1000), Number of stillbirths(130), Number of early neonatal deaths (236) and Number of pregnancies of 7+ months duration (11,071)? I am using 2016 Ethiopia DHS with Stata version 14 software.

With Kind Regards,Hassen A.(MPH)
