Hi Bridgette, greetings again and thank you for the reply. Unfortunately, I couldn't still generate the table 8.4: for EDHS 2000 which I easily did using EDHS 2005 and above data. I followed the discussions and failed to have the appropraite syntax. I used the following syntax with EDHS 2000 IR data file.

"keep caseid v001 v002 v003 v005 v008 v011 v013 v017 v018 v019 v021 v022 v023 v* s231ac_* s231c_*
rename *_0* *_*
reshape long s231ac_ s231c_, i(caseid) j(i)
drop if s231ac_==.
keep if s231ac_ > v008-60 & s231c>=7
rename s231ac_ b3"

merging with BR file using v001 v002 v003 creates error.

Can you help with fixing the merging and syntax for generating the variables "stillbirths", "early neonatal mortality", ang "perinatal mortality",please?
Kindest regards
Melese
