Subject: domestic violence module weights
Posted by zoeg on Sun, 25 Oct 2020 20:14:39 GMT

Hello,

I am having difficulty understanding how to use the domestic violence weights (d005) when I am using variables from the domestic violence module in NFHS-4. If I want to run a regression with a variable measuring domestic violence (such as d124) as my dependent variable, how do I apply the weights to that regression? Or am I supposed to weight all of the observations for that variable before I use them in my analyses?

Could someone please share their Stata code to help me with this issue?

Thank you!
