Hello Shireen and Mlue,

Thanks a lot for your assistance. Really appreciate it.

After dropping children not one year old, Shireen I was able to get 23.01% using DHS codes and Mlue I got 21.9% when I ran your codes.

Initially, I didn't want to exclude other children from the dataset because I still need to run further analysis (for instance logistics and cox proportional regression) where all children u5 will be needed in other covariates.

Please is there a way of including a conditional statement in the immunization codes so it calculates for only 12-23 months old children, instead of dropping other children from the dataset?

Thank you
