Dear Sir/Mam

I was trying to replicate some paper based on DHS-1 Data set so that to make sure if I am getting accurate results, so for that I used the DHS-1 data set of Zimbabwe and I was trying to merge the Service availability cluster level information with the individual level, but I did not able to produce exact results. It would be very helpful if anyone can help with that.

//syntax: using the individual level data and
// merge m:1 "cluster number" using the " Service availability data of Zimbabwe"
