Thank you for your response.

The variables we intend to use to describe "parental substance use" are: tobacco use and alcohol use, and we measure "child health" by the nutritional status of children under 5 years of age in terms of weight/age, height/age and weight/height.

In terms of country restriction, we will first use data from Cameroon.

We want to use the 2018, 2011, 2004 surveys from Cameroon.
