Dear expert,

I would like to calculate percentage of women age 20-24 years marriage by exact 18 years. For that I have generate denominator using awfactt and v005 and numerator number of women getting married before age 18. And successfully calculated matched with report. However, I am confused how to calculate rural urban disaggregation. Should I use awfactt and disaggregated by the v025 or use awfatu. Thanks in advance for any support or advice.

Kind regards

Nahid
