Subject: DHS STATcompiler vs DHS household data

I am working with UN Population Division's World Marriage Data 2019
(https://population.un.org/MarriageData/Index.html#/home). Part of the marital status data come
from DHS. In this case, the dataset has separate entries for "DHS STATcompiler" and "DHS
household data". The differences between the two sources are small, but still the UN Population
Division staff have opted to include both in the dataset. Where do the differences come from, and
which of the two sources would you recommend to use?
Thank you in advance for your help with that issue.
