Dear Prof,

Thanks for your clarification.

For now, i decided to use KR file following your recommendation.

Now, i am exploring child age in KR file which is mentioned b19, however i could not find it. It might replace to other variable?

Since i wish to check minimum meal frequency across aged group of child 6-23months, therefore any comment for clear variable is really appreciated.

Looking forward to hearing you,  
Best,  
Sokvy
