Subject: Multi-dimensional Poverty Index
Posted by luen0305 on Sun, 06 Dec 2020 14:31:48 GMT

Hi, I'm a relatively new DHS program user and currently working on the 2014 Bangladesh DHS and SPA datasets.
I would like to determine the poverty level for each division through multi-dimensional index. Yet, I'm struggling to find the variables that would be an indication for 'schooling', where no household member has completed five years of schooling and 'attendance', where any school-aged child in the household is not attending school up to class 8.

I would greatly appreciate the help!

Thanks!
