Hello,

I hope you are doing well in pandemic. Actually i am trying to generate the "access to health care index" at community level with the help of these variables from PKIR file (v467b, v467c, v467d) but i have no idea how we can generate the index at community level. Furthermore, how to construct community level variable for index. I am waiting for your positive response. Thank you in advance. Stay safe and healthy in pandemic.
