

Hello,

I am working with the variables documenting disability in Colombia DHS 2010. The DHS report shows that information about the intensity of the disability experienced by each individual has been collected, however that information is not available in the main data file I downloaded. Instead of showing the intensity for each functional difficulty, the disability variables in Colombia 2010 show the following output:

sh42a_01 -- has difficulty to: move around/walk

		Freq.	Percent	Valid	Cum.

		-----+-----			
Valid	0 no	49262	95.75	95.75	95.75
	1 at birth	57	0.11	0.11	95.86
	2 accident	570	1.11	1.11	96.97
	3 illness	1490	2.90	2.90	99.87
	4 violence	25	0.05	0.05	99.92
	8 don't know	43	0.08	0.08	100.00
	Total	51447	100.00	100.00	

Can you please tell me if I can get access to the intensity of the difficulty experienced?

Thanks in advance!
