Dear Sirs,

I added the vector layers of both Egypt's DHS GPS points and Egypt's polygons (district boundaries). I used the UTF-8 encoding. Whenever I attempt to join attributes by location, the following message appears "Input layers have non-matching CRS". However, when I check the CRS of both layers, I found it the same (EPSG:4326 - WGS 84).

Please advise.

Thank you.

Sincerely yours,
Amira
