Dear Tom Pullum, Good Morning!

Thanks for clarifying my confusion. One more question;

Q; How I will contain my sub-population to those who were singleton and born in the preceding five years?

Is this stata Command Correct: `tab b0 bidx if bidx==1 & v210!=1 & v208==1` to get the exact number of singleton live births in preceding five years.

I get the total number of singletons last born (recent born) live births in the preceding five years=3,738/- (Is this correct total?) Please see the stata screenshot attached.

If yes can I use my sub-pop stata command as `(b0==0 & bidx==1 & v210!=1 & v208==1)`

Best Regards

Dr. Hussain
