Subject: Re: Clustered Standard Errors Posted by analyst_till on Wed, 24 Feb 2021 14:42:42 GMT View Forum Message <> Reply to Message

So actually "group" helps us to distinguish the (different) designs of the surveys, but I would still say that I cluster standard errors at PSU-level/obtain PSU-level robust standard errors?

I guess that this is something I would always have to include. So when I would like to cluster standard errors at district-level, I first run "egen district_id = group(district survey)" and then "reg y x, cluster(district_ID)"?

Thanks a lot!
