Dear Sir/Madam,

I would like to find the association of the family and household characteristics with child discipline. So, I would like to ask some questions.

Which files should I use? HR file or PR file?

Could you explain me please about unit of analysis; will be household or household members or children?

If PR file is needed to use, how should I select the sampling units which were used for child discipline module (because the PR files have over 40000 samples).

I would like to include occupation & employment of parents. So, I would like to combine IR files and MR files to PR file. Could you instruct me please how to combine?

Thank you very much.
With Deep Respect
NYAN LINN.
