Dear Tom,

I have successfully calculated perinatal mortality use the above syntax. however not all the variables for the analysis included in the new "perinatal_mortality_file

I want to merge variables v001 v002 v003 v040 v106 v107 v113 v115 v116 v119 v130 v131 v136 v137 v151 v150 v155 ml101 v201 v208 v209 (from BR files, after saved in different file) ... and possibly many others variables from different data sets: IR, KR, and others (depending on the research questions)

I have tried to merge (one to one / one to many/use v001/v002/v003) the above variables but didn't work

I know the number of observations is different (reduced in the perinatal mortality file) and is that the problem? Would you mind to help?

Many thanks

Sam
