Hello dear dhs database experts. Hello to all forum members. I would like to merge the 2018 Cameroon DHS databases to link children under 5 years old and their parents (father and mother), for a study on parents' employment and children's health measured by weight-for-age, weight-for-height, and height-for-age Z-scores, and also preserve household characteristics. I don't know how to proceed and need your help dear experts. Please I need the detailed process since I don't have a very good knowledge of stata, I am begging you and thanks in advance. sicerly,
