Thank you, Bridgette, for the response. Here "P502000" is not clear to me, couldn't find any variable under this name. Also, there are five (p502_1 p502_2 p502_3 p502_4 p502_5) variables in p502, do we need to use all of them? Similarly, p505 has six (p505_1 p505_2 p505_3 p505_4 p505_5 p505_6) variables. The last part `cntanc2=cntanc2+1` is also unclear, why we add 1 at the end? I would appreciate it if you could help writing this in Stata.

Thank you!
