Good morning dear experts, I thank you for your answer and I come back to you because I am facing huge difficulties. To the question if I use stata, I answer affirmative. To the question whether I have looked at the different data files, I also answer in the affirmative. But unfortunately the KR file does not contain all the variables I need for the mother for my analysis. Also I really don't understand how I can proceed to join the father's information to the children. Therefore, I come very humbly to your expertise to ask you to help me by providing me with concrete syntaxes for the realization of this merge for DHS 2018 of Cameroon.
Thank you for your help.
