Dear Dr. Pollum,

Thank you very much, again for your very informative answer. I have included in attachment a file with the two binary logistic regressions based on the two different weight options. Up until now, I have worked with WGT_men. But what do you suggest to avoid that SPSS will round?

Pic1 = binary logistic regression results using MV005
Pic2 = binary logistic regression results using WGT_men = MV005/1,000,000
