Dear Bridgette,

Many thanks for your response; I had one small follow-up question.

After reading the DHS Pakistan report 2017-2018, I noticed the outcomes of emigration were classified into four groups: "Middle East", "Europe", "North America", and "Other Countries" (I attached a picture for clarification to the email).

Of course, I understand I would not be able to receive the coding as this could reveal the PII. However, would it be possible to share the data file that includes the variable that refers to the general areas of emigration (Middle East, Europe, North America, and Other)? Or a selection of this data file including the coded general areas of emigration, hv001 (cluster number), hv002 (household number), and hv003 (respondent's line number)? In this case, I could merge my dataset with the general areas that already have been coded, and I have no information about the PII.

I really appreciate all the help you can provide.

Best wishes,
Inez
