v625a is relatively simple to construct once you have run the unmet need code.

```
gen v625a = 0
```

```
replace v625a = 1 if v213==1
```

```
replace v625a = 2 if v625a==0 & pregppa24==1
```

```
replace v625a = 3 if v625a==0 & infec != 0
```
