Dear expoerts,
Please give your feedback on the following coding which i have used for constructing "community level poverty" using dhs data of Pakistan. i need to know if this variable has been constructed correctly.

```
gen cpvt=0
replace cpvt=1 if v190==1
bysor v001:egen cmpov=mean(cpvt)
xtile compov=cmpov,nq(3)
la def compov 1 low 2 moderate 3 high
la var compov "Community Poverty Level"
la val compov compov
tab compov[iweight=wgt]
```
