Hello,

We do not provide tables on the forum but try to help users calculate indicators so they can perform their own analysis.

It also appears that nutritional status of women was not covered in the Ethiopia 2019 Mini DHS. Tabulations by region and place of residence would have been in the final report if information was collected. Please see the final report at:

https://www.dhsprogram.com/publications/publication-fr363-dhs-final-reports.cfm?cssearch=351233_1

You can find tabulations by children's nutrition indicators there (table 8.1) but not the women's.

Thank you.

Best,
Shireen
