Dear Sara,

Thanks a lot for your kindest support and I was able to create the variables except "equipment for high level disinfection" of table 3.5.

I have tried to create this variable according to the footnote, and questionnaire but unable to match with the report table.

The code is:

```
gen sw=facwt/1000000
gen ste=0
replace ste=1 if (q201==1 | q201==2) & ((q501a_1==1 & q501b_1==1) | (q501a_3==1 &
q501b_3==1) | (q501a_6==1))
tab ste [iw=sw]
```

Would it be possible to get the correct code of this variable?

Regards,
Ashraf
