Dear Sara,

Thanks for your help and I was able to recreate variables.

Now, I want to create the variable regular electricity of table 3.3 in DR Congo SPA 2017-18. I have tried with the following codes:

gen sw=facwt/1000000

gen q343a=regexm(q343, "A")

gen q343b=regexm(q343, "B")

gen q343c=regexm(q343, "C")

gen q343d=regexm(q343, "D")

gen ect=0

replace ect=1 if q340==1 & q341==1

replace ect=1 if (q343a==1 | q343b==1) & q345==1 & q346==1

replace ect=1 if q343c==1

replace ect=1 if q343d==1

tab ect [iw=sw]

But unable to match the % with the report table. I wish your help to create this variable.

Regards,

Rasel
