Hi Shakim,

The best way to know exactly what was measured for each variable is to look at the questionnaires located in the appendix of each final report. For Bangladesh 2017 SPA (<https://dhsprogram.com/pubs/pdf/SPA28/SPA28.pdf>) on page 213 you can see the section of the questionnaire which includes insulin. The question asks about INSULIN INJECTIONS [ANTI DIABETIC], so we can conclude that any injectable insulin was included in the variable.

Best,  
Sara
