I've been digging into the Fieldworker datasets, and merging datasets based on v028 and fw101.

Based on this join, it looks like Burundi (BU7) has 276 men's questionnaires administered by females, and zimbabwe (ZW7) has 186 men's questionnaires administered by women. Then, Zimbabwe looks like it also has 71 of the women's questionnaires administered by a male.

Is this correct, or am I doing something wrong here?

I couldn't find information about it in the reports, but maybe I'm missing it.

Thanks!
